SHARP Unveils MultiSync® PN-M & PN-P Series: Built for Impact, Engineered for Endurance

MISSISSAUGA, ON, June 11th, 2025 – Sharp Electronics of Canada Ltd. proudly announces the launch of MultiSync® PN-Mxx2 and PN-Pxx6 Series with three powerful new models: the **PN-M552**, **PN-M652**, and **PN-P556**. These premium displays are purpose-built to meet the evolving needs of business environments across Canada - from corporate boardrooms, restaurants and retail spaces, healthcare facilities, to transit hubs.

Marking four decades of trusted MultiSync display technology, these new 55” and 65” class models are designed to perform in hybrid, high-demand settings, offering a powerful blend of **brightness, visual clarity, reliability, and energy-efficient performance** - especially important in environments where long operational hours and consistent image quality are non-negotiable.

Key Enhancements:

Exceptional Colour Precision with SpectraView Engine™

Sharp's SpectraView Engine ensures consistent, calibrated colour output across all environments - vital for industries like healthcare, broadcasting, and creative production where precise visuals are a must. The PN-P556's wide colour gamut panel further enhances vibrancy, making it ideal for immersive marketing displays and public information screens.

Bright & Reliable in All Seasons

With luminance stabilization and brightness levels of **550 nits (PN-M552 and PN-M652)** and up to **700 nits (PN-P556)**, these displays deliver strong, crisp visuals even in bright public spaces - no matter if it's sunny in Calgary or overcast in Halifax.

Built-In Smart Cooling for 24/7 Use

Internal sensors regulate temperature proactively, ensuring the displays perform reliably across the wide range of Canadian indoor climates.

Designed for modern Installations:

- **USB-C Input with 65W Power Delivery:** Reduces cable clutter and simplifies setup - perfect for clean, modern workspaces across sectors.

- **Modular SDM-S/L Compatibility:** Supports integrated computing or AV solutions with no visible wiring, crucial for retail and public installations where aesthetics matter.
- **Industry-Wide Integration Support:** Seamlessly connects with AV infrastructure standards and centralized control systems for national rollouts.

"We designed the new MultiSync displays with flexibility and longevity at the forefront - because that's what our partners demand. Whether you're powering mission-critical control rooms in Montreal or deploying dynamic signage in Alberta retail chains, these displays are built to perform without compromise," said **Kalden Tsung, Product Manager, Visual Solutions at Sharp Electronics of Canada**. "This launch underlines Sharp's commitment to delivering robust, secure, and visually stunning display technologies that meet the unique demands of the Canadian market."

All models feature advanced IT-level security including IEEE 802.1X authentication, admin password protection, browser lockout, and internal encryption - aligning with the privacy and compliance standards that public and private sector organizations expect.

The **PN-M552** and **PN-P556** models will begin shipping in **June 2025**, with the **PN-M652** available **starting July**.
